# Tip 26 - Be clear about the handling of new input

# Input can come in from different sources

**Stakeholder**　　**Product Owner**　　**Developers**

▶ **Be clear to everyone that before they add the input, they have to know exactly where to place it to prevent serious mix-ups.**

**Prioritize the input and place it on the rightful place on the product backlog**

If any input is not placed in the right slot on the backlog

It will receive no attention from you

# In Summary

- Be clear about the handling of new input
